Professional Summary

Senior Unity Gameplay Programmer with 7+ years of professional experience delivering commercial Android and iOS games using Unity and C#. Specialized in gameplay architecture, scalable gameplay systems, LiveOps, backend integrations, and performance optimization. Experienced owning complex gameplay features from design through release, collaborating with multidisciplinary teams, and building maintainable systems using SOLID principles and modern software architecture. Served as the sole Unity developer on a live-service mobile title, leading implementation of Season Pass, player progression, economy, tournament support, backend-driven content, platform integrations, and gameplay architecture.

Core Skills

- Unity Engine, C#, Gameplay Programming, Mobile Game Development (Android & iOS), LiveOps
- Gameplay Systems: AI, Combat, Player Controllers, Inventory, Quests, Dialogue, Progression, Economy, Battle Pass, Tournament Systems
- Architecture: SOLID, OOP, Dependency Injection, Service Locator, Observer Pattern, Modular Systems
- Backend: REST APIs, JSON Serialization, Firebase, PlayFab, Unity Analytics, Remote Config, JWT Authentication, Apple Sign In, Google Play Services
- Performance: Unity Profiler, Memory Profiler, Object Pooling, Async/Await, Coroutines, CPU & Memory Optimization
- Tools: Git, GitHub, Android Studio, Xcode, Agile, Scrum

Professional Experience

Awo Gaming | Senior Unity Game Developer (Remote Contract)

Jan 2026 – Jun 2026

- Served as the sole Unity developer for The Lost Tower, taking ownership of gameplay architecture, feature implementation, debugging, optimization, and production support.
- Designed and implemented scalable gameplay systems including Season Pass, player progression, upgrade systems, economy, tournaments, rewards, and backend-driven LiveOps content.
- Built reusable gameplay architecture using SOLID principles, Dependency Injection, and Service Locator to improve maintainability and accelerate future feature development.

- Integrated authentication, progression, rewards, economy, tournament, and live-content REST APIs using JSON-driven configuration.
- Worked closely with backend engineers to deliver configurable gameplay features without requiring client updates.
- Integrated Firebase, Unity Analytics, Google Play Services, Apple Sign In, advertisements, push notifications, and platform services.
- Optimized gameplay using Unity Profiler, Memory Profiler, Object Pooling, Async/Await, and Coroutines while maintaining stable performance across Android and iOS.
- Participated in sprint planning, technical discussions, debugging, code reviews, estimation, and Agile delivery.

Destiny Interactive | Senior Software Developer

Aug 2025 – Jan 2026

- Developed foundational gameplay systems for an MVP underwater survival game.
- Implemented player movement, combat, AI, inventory, and reusable gameplay frameworks.
- Collaborated with designers and artists to prototype, iterate, and refine gameplay mechanics.
- Supported Agile development through debugging, sprint planning, and feature implementation.

Juego Studios | Senior Software Engineer

Dec 2020 – Jul 2025

- Designed a reusable Observer Pattern communication framework enabling loosely coupled gameplay, UI, and backend systems across multiple commercial Unity projects.
- Architected a modular client-side REST API framework with API managers, service layers, route definitions, and strongly typed request/response models.
- Developed gameplay systems including AI, combat, player controllers, inventory, quests, dialogue, progression, save systems, and UI.
- Integrated PlayFab, Unity Analytics, advertisements, and backend services supporting player progression and live functionality.
- Built reusable ScriptableObject-driven systems following SOLID principles to improve scalability and code quality.
- Mentored junior developers through code reviews, technical guidance, sprint planning, estimation, and client collaboration.

Knackbout Studios | Software Developer

Sep 2017 – Dec 2020

- Developed gameplay systems for educational games, enterprise event games, and interactive marketing experiences.
- Implemented gameplay mechanics, AI, UI, inventory, save systems, and player interactions.
- Worked directly with clients to demonstrate builds, gather feedback, and rapidly iterate features.
- Contributed to Android and iOS releases using clean, maintainable Unity C# code.

Selected Commercial Projects

- The Lost Tower — Live-service Tower Defense | Gameplay Architecture, LiveOps, Backend Integration, Progression, Season Pass
- Zoo Guardians — Gameplay Systems, AI, Save Systems
- Ultimate Cafe Franchise — Gameplay Systems, UI, Feature Development
- Pixiu World — Gameplay Systems, Progression, Performance Optimization
- Savior of Data Realm — Gameplay Systems, AI, UI, REST API Integration
- Wordy (Personal Project) — Gameplay Programming, Game Architecture

Key Technical Highlights

- Owned gameplay architecture and implementation for a commercial live-service mobile title.
- Designed backend-driven gameplay systems powered by configurable JSON content.
- Architected reusable gameplay and backend integration frameworks adopted across multiple projects.
- Strong experience collaborating with backend engineers, designers, artists, QA, and production teams.
- Experienced mentoring junior developers and contributing to technical decision-making.

Education

Professional Diploma in Game Programming — Asian Institute of Design

Pre-University (12th Standard) — St. Claret PU College
